

Technology K2127: CDMA Wireless Mic with Portable Speaker

World's first Code Division Multiple Access (CDMA) wireless microphone and speaker. The CDMA protocol for sending voice provides excellent sound quality with no background noise and minimal influence of signal mixing or chopping as can occur with Bluetooth. Small wireless headset transmits to a compact and lightweight (12 oz.) portable speaker worn on the user or placed inside a room or outdoor area.

- **Use:** Ideal for small and medium sized audiences, such as tour groups, where portability and clear voice transmission are required.
- **Coverage:** Multiple speakers can be used to increase coverage to larger audiences.
- **Range:** CDMA enables up to a 10 meter distance from headset to speakers.
- **Battery charge:** Headset: 8 hours; Speaker: 20 hours.
- **Versatility:** Easy connection to electronic devices for use as an external speaker.
- **Value:** IntegriTalk's president & professional speaker thought the price would be much higher.
- **User experience:** Blanton Museum director was impressed by its sound quality, light weight, ease and comfort.
