

## **Technology 248: Enterprise Software Provides Real-time Prevention of Data Leakage, File Monitoring, and File/Storage Lifecycle Tracking**

The technology addresses the growing need and legal requirement that businesses & corporations incorporate data security software within their IT infrastructure that minimizes the chance of data theft and loss of personal employee data and corporate IP.

EagleEyeOS provides a complete family of software solutions for home, small business, and enterprise solutions. The technology incorporates client and server agents that in real-time monitor all events related to files on the system/network, and controls access to all files, printers, and storage devices connected to the network. The software's rule enforcement technology works in the kernel of the operating system, between the levels of the access control and the file system. It enables protection processes that cannot be found in competing solutions. Other key differentiator from the competition include:

- Application Independence
- File System and Hardware Independence
- Support of the Non-Microsoft-Based File Sharing
- Reproduction Independence
- Device & Storage Independence

### **Development Status**

The product line is fully developed and selling in Central Europe and Switzerland. The company is looking for a strategic partner in N.A. that has extensive marketing and sales channels.

### **Competition**

Major competitors include Symantec, McAfee, Trend Micro, Verdasys. There has been an aggressive acquisition of smaller competitors within this industry, The market continues to expand due to government compliance regulation, including HIPAA and Sarbanes Oxley (SOX) requirements.

### **IP Status**

The company uses patents, trademarks, and trade secrets to protect it's IP. It is protected under U.S. and European patents.

### **Development Needs & Next Steps**

No further development is required. Need to identify potential strategic partners.
